Hawaiʻi stress-test annex

Data as of 2026-10-28

Planning aid. Supports, does not replace, county emergency plans. Not an official shelter list. Per-area counts from 1 to 9 are not shown. All figures are public Census Bureau, CDC and HHS estimates, not personal records.

Stress test, not a forecast. Each test changes one thing in the plan (a site closes, two hazards strike together, a road is cut, more people come) and counts who is affected, from the plan's own data. Deterministic code computes every number from the plan's data; people review the results. Results depend on the 30 sites opened in 2026; county-designated lists would change them.

People counted: residents of Census areas whose drive from the area's centre point to the nearest usable 2026 site was 15 minutes or less before the loss and is more than 15 minutes (or no route) after it; areas already beyond 15 minutes are not counted.

358 tests ran for Hawaiʻi; 99 affect someone or need county data and are listed below. Two-site losses are listed only when they add people beyond either site alone. This is not a statement that the area has no shelter: counties designate and open shelters for each event, and many public buildings are not on the 2026 list.

Hurricane: top 10

1. **Lose Kea‘au Armory and Pu‘u‘eo Community Center (hurricane)** (test 2: Two sites lost)
   48,669 people in the risk area pushed outside a 15-minute drive to a usable 2026 site (Census areas pushed outside a 15-minute drive: 9; people more than losing either site alone: 28,820).

10. **Stays of 3 to 30 days – Hawai‘i (coastal flooding)** (test 11: Longer stays)
    2,698 people who may need a public shelter (likely).
    By length of stay: 14 days: 107,939 sq ft of floor space, 75,558 meals, 135 toilets, 37,786 gallons of water; 3 days: 53,970 sq ft of floor space, 16,191 meals, 68 toilets, 8,097 gallons of water; 30 days: 107,939 sq ft of floor space, 161,910 meals, 135 toilets, 80,970 gallons of water; 7 days: 107,939 sq ft of floor space, 37,779 meals, 135 toilets, 18,893 gallons of water · People in shelter (likely): 2,698 · Per person per day: 2 meals; 1 gallons of water
    Sources: Florida Division of Emergency Management, Sheltering Guidance Aid (2010); CDC/ATSDR Social Vulnerability Index 2022 (ACS 2018–2022), HHS emPOWER, FEMA National Risk Index; 2020 Census blocks; shelter-seeking rates in the plan (South Carolina EMD 2026 Annex G; Maui 2023 observed; team assumptions). Team assumptions: Floor space and toilets use the 2-week factors for stays over 3 days, also past 14 days: 40 sq ft; 1 toilet per 20.

Questions for counties

These need county knowledge. The plan has no data for them, so it shows no numbers.

1. **Shelter buildings in an earthquake or a strong hurricane:** Which shelter buildings have been assessed for earthquake and hurricane-wind resilience, and which need a check before they are used after a strong event?
2. **Resupply for Molokaʻi and Lānaʻi:** How would water, food, cots, fuel and medical supplies reach Molokaʻi and Lānaʻi if the harbours or airports close for several days, and who decides the order of shipments?
3. **Cell network outages:** Which areas lose mobile phone service first in a long power outage or after wind damage, and how will warnings and shelter information reach them (radio, sirens, door-to-door)?
4. **Schools used as shelters:** When a school is used as a shelter, how long can it stay open before classes must restart, and where do residents go next?
5. **Partner capacity:** Could each county collect partner capacity (cots, meals, staff, vehicles, interpreters) with a county-run form such as Survey123, with no personal data, so the plan can show pledged capacity instead of 'confirm with partner'?
