# Honolulu – Coastal flooding ESF-6 playbook

**Data as of 2026-10-28**

**County:** Honolulu · **Hazard:** Coastal flooding

**Planning aid. Supports, does not replace, county emergency plans. Not an official shelter list.**

## 1. Summary

**Calculated by open code from public data · see Sources (section 8)**

Source: CDC/ATSDR Social Vulnerability Index 2022 (ACS 2018–2022 estimates), HHS emPOWER, FEMA National Risk Index v1.20; shelter rates: section 8.

Share of people in the risk area who may need a public shelter: low 2%, likely 5%, high 11%. One person can be counted in more than one need. Page 2 explains how to read these numbers.

## 2. Scope: county total vs. one community

**The county total is an upper bound.** It counts the 25% of Census areas in the county with the highest FEMA risk score for this hazard as hit at the same time. Real events usually hit fewer communities.

### Largest single community (the Census areas with the most people who may need a shelter)

| Community (Census area) | People in the risk area | May need a public shelter (low – likely – high) | Speak English less than well | Use power-dependent medical equipment (estimate) | People with a disability | Age 65 and older | People in households without a car |
|---|---|---|---|---|---|---|---|
| Lā'ie<br>Census area 102.02 | 6,980 | 140 – **349** – 768 | 82 | 20 | 456 | 582 | 706 |
| near Hālawa<br>Census area 74 | 6,954 | 139 – **348** – 765 | 12 | 0 | 32 | 4 | 0 |
| Mā'ili<br>Census area 96.10 | 6,914 | 138 – **346** – 761 | 18 | 37 | 858 | 1,076 | 116 |

Source: people and needs – CDC/ATSDR Social Vulnerability Index 2022 (ACS 2018–2022 estimates), HHS emPOWER and FEMA National Risk Index v1.20; community names – 2020 Census blocks and places, spellings from USGS GNIS.

To plan for one community, use the first row.

## How to read this playbook

### Example row

| Community (Census area) | People in the risk area | May need a public shelter (low – likely – high) |
|---|---|---|
| Lāʻie<br>Census area 102.02 | 6,980 | 140 – **349** – 768 |

Read it as: about 6,980 people live in the risk area of Lāʻie. If this hazard hits, between 140 and 768 of them may need a public shelter; 349 is the likely number.

### Census area

A neighborhood-sized area the U.S. Census uses, usually 1,200–8,000 people. The number (for example "Census area 308") is its Census ID. Each area is named after the Census place where most of its people live. "near" means no one in the area lives inside a named place; "rural near" means most people live outside named places.

### Low – likely – high

The share of people in the risk area who may go to a public shelter: low 2%, likely 5%, high 11%. Where the rates come from: Team assumptions: likely 5%; low 2% (the hurricane planning factor); high 11% (the Lahaina 2023 rate).

### Who has access and functional needs (CMIST)

- **C – Communication:** people who speak English less than well (they may need interpreters and translated messages), and people with hearing or vision difficulty.
- **M – Medical:** people who use power-dependent medical equipment (an estimate from HHS emPOWER).
- **I – Independence:** people with a disability, people with cognitive difficulty (memory, decisions) and people age 65 and older.
- **S – Safety and support:** people age 65 and older living alone, children and people living in group quarters (in the needs table).
- **T – Transportation:** people in households without a car.

### County total vs. one community

The county total counts the 25% of Census areas in the county with the highest FEMA risk score for this hazard as hit at the same time, so it is an upper bound. Use the "Largest single community" table to plan for an event that hits one community.

### Map

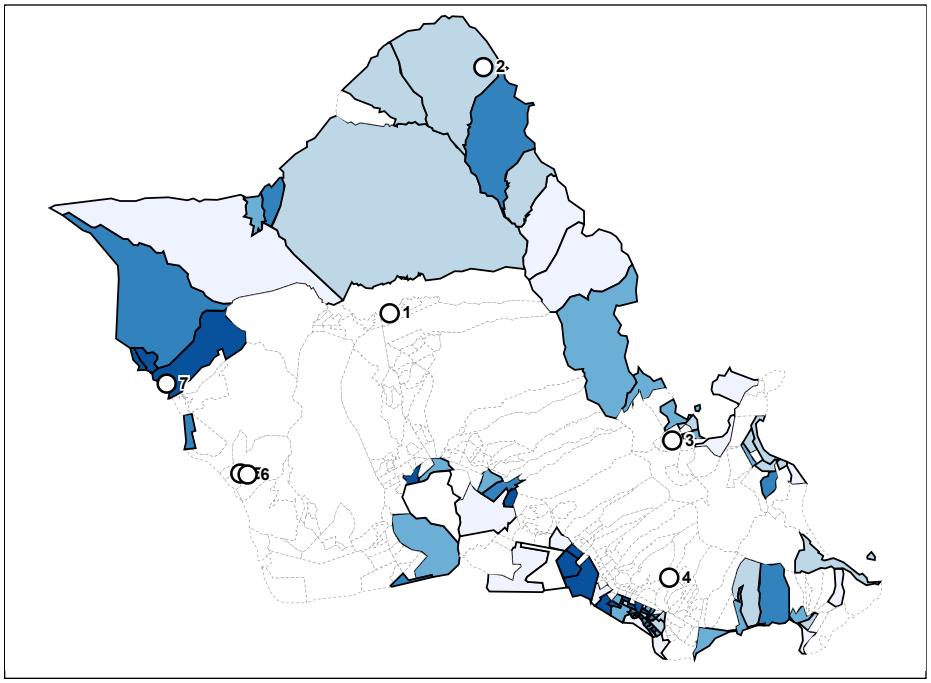

Darker blue means more people with needs, from "Lowest need" to "Highest need". A solid outline marks a Census area in the risk area; a dashed outline is outside it. Symbols: ○ usable site, △ check flood zone, ◇ flood risk not mapped, ⊠ not for this hazard. Numbers on the map match the site key.

### Why population numbers can differ

People in the risk area come from ACS 2018–2022 estimates (through the CDC Social Vulnerability Index 2022). Community names use 2020 Census counts. County totals in the plan use Census estimates for 2025. Each table names its source underneath.

**Every number is a planning estimate. In an event, follow county announcements.**

**Who else to plan for**

- **Domestic-violence survivors:** Served through confidential providers; no counts by design.
- **Off-grid households:** No public Census-area data; county and health partners to supply.
- **People on dialysis or receiving home care:** No public Census-area data; county and health partners to supply.
- **Earthquake:** Not modeled; listed as a limitation in the plan.
- **Caregivers and personal care attendants:** Stay with the person they support; count them for cots, meals and space.
- **Behavioral health:** Mental-health staff at each shelter (ratio: section 8).
- **Ni‘ihau:** Privately owned island, no public shelter; plan with the landowner and Kaua‘i County.
- **Families afraid to seek shelter (including immigrant families):** The county publishes who may use shelters; trusted community messengers share it.

## 9. Results

- **Coverage:** 436 of 436 Census areas have needs data (FEMA risk data joined for 435 of 436). Source: coverage check of the needs layer (CDC SVI 2022, FEMA NRI v1.20).
- **Backtest – Lahaina wildfire (2023-08-11):** observed 1,418 people in shelters; model 254 / 635 / 1,423 (low / likely / high). This is a calibration event, not validation: the high rate was set from it. Source: Lahaina 2023 backtest (Maui Now count of people in shelters).
- **Time:** a full rebuild from local data (12 steps, 20 scenarios, 20 playbooks) took 68.9 seconds on Apple M4 (2026-10-28). Team-assumed baseline without this tool: 2 working days per county per event. Sources: timed full rebuild from local data; Team assumption, to be confirmed with DHS in a timed tabletop exercise.
